WORK EXPERIENCE

Chamber Of Commerce   Fullstack Developer

Iraq, Sulaymaniyah   June 2024 - May 2025

ERP selection: Faced with 12 conflicting ERP requirements, performed a gap-fit analysis (68 evidence points) → convinced leadership to adopt a lightly customized off-the-shelf ERP → **saved months of bespoke development and significant CAPEX**.

Auth overhaul: Legacy login flow was brittle across web/mobile → rebuilt authentication as reusable TypeScript services, containerized with Docker and deployed via GitHub Actions → **cut release time by 30 % and eliminated recurring auth bugs**.

Face-ID rollout: Compliance demanded stronger KYC → integrated CompreFace into a Vue 3 front end and Laravel API for real-time liveness and facial-match checks → **raised account-verification pass-rate to 96 % while deterring fraud.**

Tech Skills: Laravel, Vue, Typescript, Pinia, SCSS, n8n, CI/CD.

Moonline Travel   Frontend Developer

Iraq, Sulaymaniyah   May 2020 - June 2024

Form-builder revamp: Manual, error-prone visa forms slowed ops → interviewed staff, then built a validation-aware form builder (Vue 3 + TypeScript + JSON Schema) with autosave & in-app bug reports → **cut data-entry errors by 70 % and saved developers 100+ hours**.

Customer portals: Disparate tools frustrated agents and clients → shipped a B2B credit portal, customer hub, and admin dashboard (Laravel + Vue 3, MySQL) → **streamlined 20 000+ visa requests for 1 000+ agents, boosting self-service adoption to 85 %.**

SAP query tuning: Critical dashboard reports took 11 s to load → dissected SAP docs, rewrote filters & joins → **slashed load time to 2 s (5× faster) without touching backend logic**.

Reliability & knowledge transfer: Early releases needed hardening → orchestrated 50 + joint UAT sessions with ops, iterated on edge-case bugs, and produced step-by-step docs plus live workshops → **cut onboarding time for new devs by 40 % and let them build custom forms in under 30 minutes**.

Legacy enhancement: Inherited a 60 k-line PHP/Vue codebase with brittle modules → added high-impact features (draft restoration, OAuth SSO), refactored hot-spots, and built compatibility shims → **kept 100 % uptime, eliminated recurring crashes, and extended app life without costly rewrites**.

Tech Skills: Laravel, PHP, Vue, Vite, Typescript, Responsive design, Documentation, Web accessibility, CSS.

TECHNOLOGIES

Backend: Laravel, RESTful API, Unit Testing, Application Tuning, MySQL, VPS.

Frontend: Typescript, Vue, HTML, CSS Tailwind, Vite, Playwright,UX/UI.

Soft Skills: AI Prompt Engineering, Agile methodologies, Team collaboration, Cross-functional collaboration, Communication, Self-initiative, Responsibility, Active participation.

EDUCATION

University Of Human Development

B.S.C OF INFORMATION TECHNOLOGY
Iraq - Sulaymaniyah   *2017 - 2021*

Central Office for Foreign Education

STATEMENT OF COMPARABILITY I.T
Germany   *2023*

SOLO PROJECTS

Kartei : A mobile-first progressive web app for studying translations with flashcards.

- Built with Vue 3, TypeScript, Dexie (IndexedDB), and Laravel, featuring offline support, responsive Ionic UI, and native browser TTS for pronunciation.

- Deployed via custom CI/CD pipeline to VPS, auto-detecting and prompting PWA version updates on user login.

AWARDS

Hackasully - 2019
Hackathon 1st place Winner 4000 $ Award.
